

INTRODUCTION

elasti is the brand name for TITGEMEYER expanded polyurethane foam products.

Components made from elasti have a clean, smooth, pore-free surface. The outer layer is very tough and extremely resistant to tearing.

Durability, high tear strength, low weight, and resistance to temperature, oils, fats, petrol, weak acids, alkaline solutions, etc. are all significant advantages of polyurethane foam material.

The structure of the inner cells provides a supple material which is ideal for bumpers, grab handles, steps and many other products.

Steel reinforcement can be incorporated to provide strength if required.

Robotic production facilities and in-house tool manufacture ensures products of the highest quality.

We produce a wide range of components to customer specifications many of which include company brand names and logos.

This literature includes some typical examples of our range of elasti products.

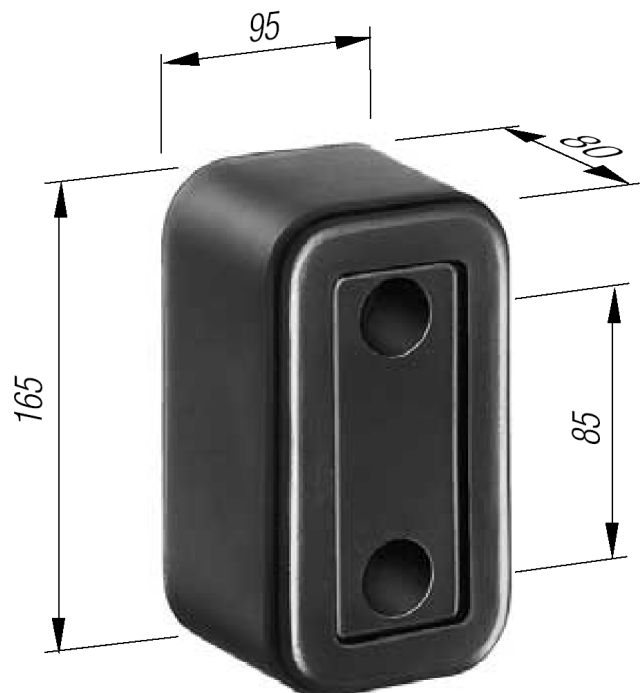

Please contact us for more information.

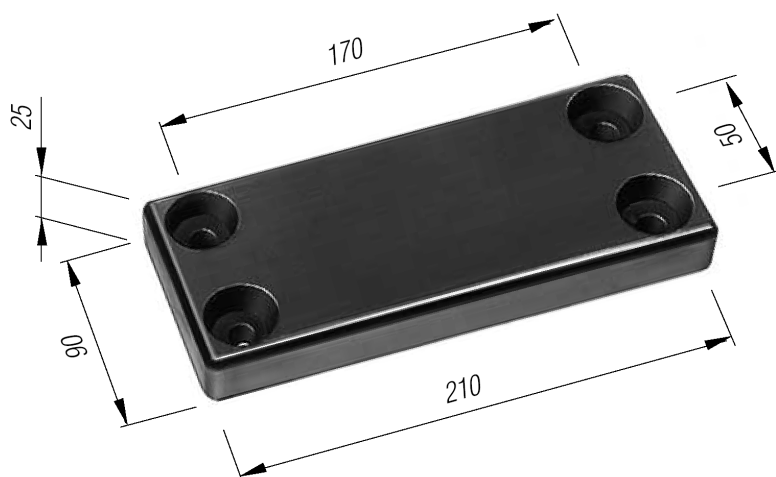

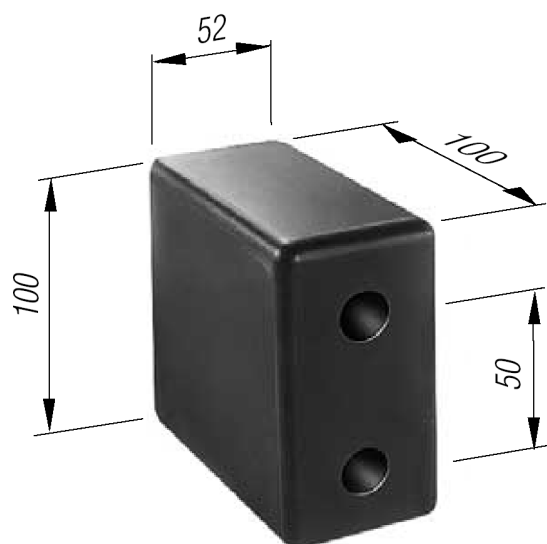

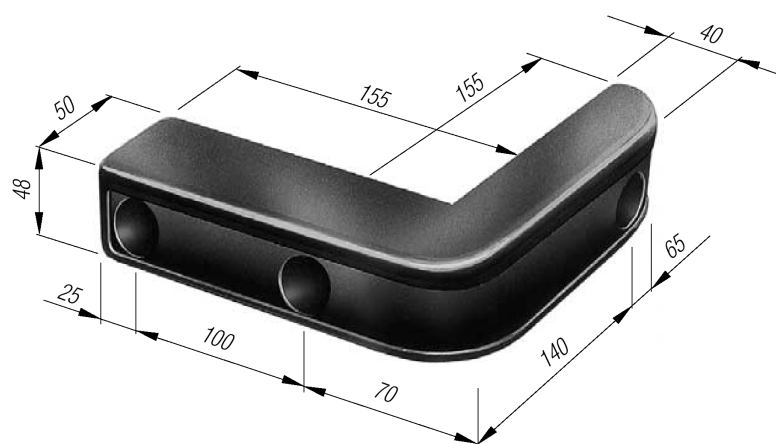

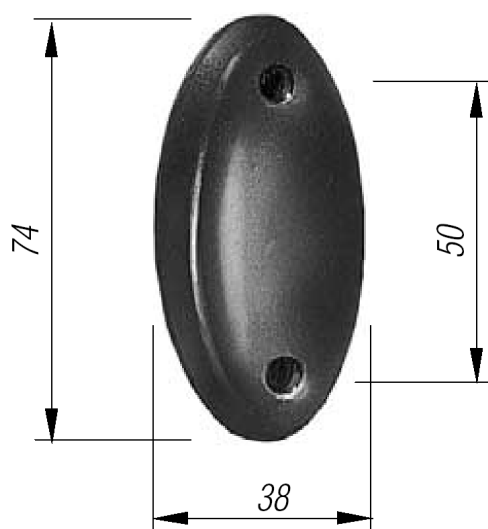

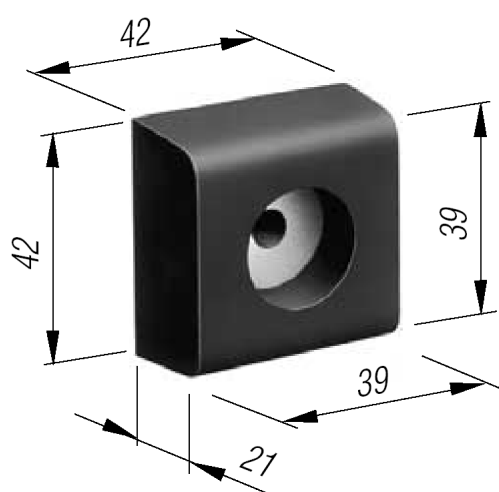

Example:

Comparison of an elasti bumper to the same conventional rubber bumper:

elasti bumper: 0.63 kg each

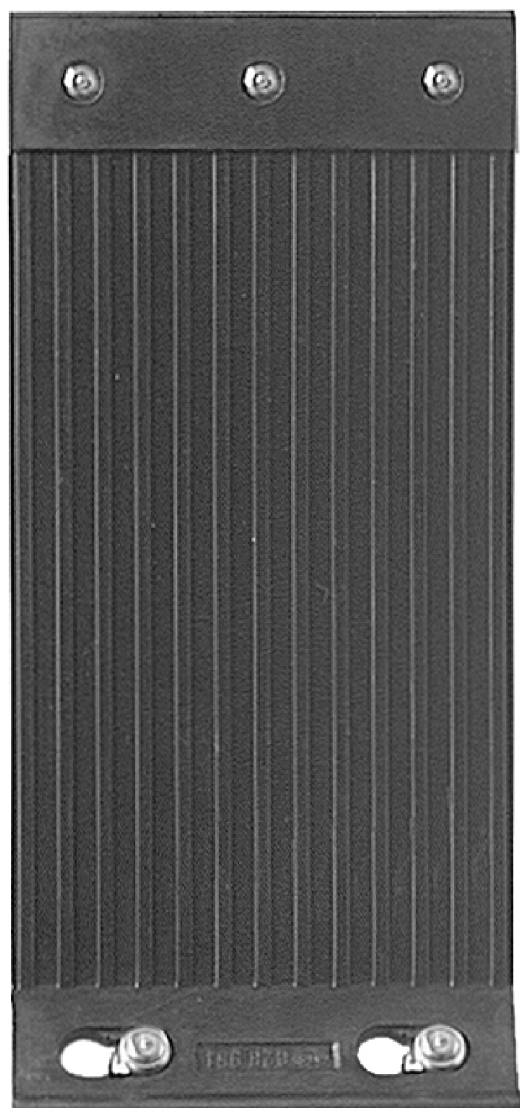

rubber bumper: 1.74 kg each
